OUR GOAL

Stronghold Healthcare, part of Stronghold Global Ltd, are industry leaders when it comes to PPE supply. Our goal is to ensure the safety of the millions in our country by offering a consultative yet efficient approach to PPE procurement. We firmly believe that money can't buy experience and having been established for over 20 years, we have plenty of it.

11M

UNITS OF PPE SUPPLIED

Through our established manufacturer relations we have managed to meet demand

150K

KEY WORKERS

SUPPORTED

*Since April 2020

20 YEARS

IN BUSINESS

We truly are experts in our field

We have supported Sheffield Teaching Hospital Foundation Trust and University College London Hospital Foundation Trust with over 8 million units of PPE throughout the Covid-19 pandemic. Through our transparent and collaborative partnership approach, we were able to find solutions to enable these trusts to continue their life saving work.

"We have over the last two years received a second to none service from the team at Stronghold. There is nothing to big and nothing to small. Max and the team will go the extra mile to support which takes any worries away from us. Many, many thanks and keep up the great work"

Peter White, Operations Coordinator at TESCO

OUR MASKS

Our masks are sourced from only the highest quality manufacturer's, ensuring the best possible standard of safety required for the end user. We guide our customers through complicated legislation so you remain compliant and, ultimately, **safe**.

With legislation becoming increasingly complicated by the day, we have simplified the process of procuring your PPE.

TYPE IIR

Approved for use by the NHS, this Type IIR Surgical face mask provides the highest standard of reliable barrier protection, due to its fluid-resistant capabilities. This kind of mask offers further protection than a standard mask as they block potentially-infected droplets from entering the respiratory system.

FFP1, FFP2 OR FFP3?

Simply, an FFP3 will offer greater protection than FFP2 and FFP1. Selection of the most appropriate respirator depends on the contaminant and Occupational Exposure Level (OEL) and guidance should always be sought. Please contact a member of our team for guidance.

VALVED OR NON-VALVED?

The valve helps lower the temperature inside the mask. However, a mask with no valve is more effective in preventing the spread of a virus from the wearer to those in close proximity. This makes it ideal for healthcare workers.

TYPE IIR

Approved for use by the NHS, this Type IIR Surgical face mask provides the highest standard of reliable barrier protection, due to its fluid-resistant capabilities. This kind of mask offers further protection than a standard mask as they block potentially-infected droplets from entering the respiratory system.

FFP2 FOLD FLAT

The FFP2 mask offers mid-level respiratory protection against solid airborne particles, fine dusts and liquid aerosols. The fold flat design allows for easy storage and can be shaped to fit a wide range of face shapes meaning they are much more comfortable to wear over longer periods of time.

FFP3 NON-VALVED, CUPPED

This FFP3 offers high-level respiratory protection against very fine, toxic dusts, fumes, and oil- and water-based mists. This classic valveless design has been tried and tested for over 40 years of use in sectors including healthcare, manufacturing and construction. The lack of an exhalation valve makes this the ideal mask when the primary purpose is not just to protect the wearer but others around them.

FFP3 VALVED, CUPPED

The most comfortable mask available due to the cupped face shape and the thick soft foam face-fit seal, this FFP3 offers high-level respiratory protection against very fine, toxic dusts, fumes, and oil- and water-based mists. The valve helps lower humidity and the temperature inside the mask.

FFP3 VALVED FOLD FLAT

The twin-fold pleats on the fold flat mask allow freedom of movement so the wearer can talk easily without compromising the fit around the face. The large filter and exhalation valve reduces the build-up of heat and moisture, making it ideal for needing to communicate and stay protected during long shifts.
